Openstack architecture in cloud computing ppt presentation pdf format

OpenStack Dashboard is a Python project that aims to provide a complete panel along with an extensible framework for building new panels. 72 73 Management Tools – SenlinSenlin is a cluster service for OpenStack clouds. 85 86 Application Services – MuranoMurano allows application developers and cloud administrators to publish multiple cloud-ready applications in a navigable catalog. 44 45 Computing – Zun Zun provides an OpenStack API for starting and managing containers supported by different container technologies. 16 17 Management Tools Ã¢Â ¢Â´Â´Â´The HorizonOpenStack Dashboard (Horizon) service allows the management of cloud resources through the web console. 26. 89 90 Monitoring – CloudKittyCloudKitty is a classification-as-a-service project designed to translate metrics into prices. It uses a REST API for high-speed metrics processing and querying, and has a flow alarm mechanism and a notification mechanism. 45 46 Storage Swift – Object Store Cinder – Block StorageManila – Shared Filesystems Karbor – Application Data Protection as a Service Freezer – Backup, Restore, and Disaster Recovery 46 47 Storage – Swift is an object storage/blob highly available, distributed and, finally, consistent. A few numbers: Overview A few minutes of Ã¢Â ¢Â´wc Ã¢ÃÂ¸Â´´ÂÂÂÂÂ´WellÂ It uses Elasticsearch, a real-time distributed indexing and search engine built on Apache Lucene, but adds authenticity to OpenStack and Role Based Access Control to provide adequate data protection. After receiving API calls, the heat api processes them by sending them to the heat engine via the AMQP protocol. Area of Research and Development: Cloud, virtualization, network and operating systems. It supports LDAP, OAuth, OpenID Connect, SAML and SQL. Cinder currently functions as the canonical storage provisioning control plan in the for block block in addition to providing a persistence model, for example, storage. OpenStack is an infrastructure as a service known as a cloud operating system, which takes resources such as compute, storage, networking, virtualization technologies and controls these resources on a data center level. Basic requirement: Ã¢ ââ¢¢Â ¢¢¢Â ¢¢¢¢Â ¢¢¢¢ Â ¢¢¢¢ Â ¢¢ 47 48 Storage – Cinder Cinder is a block storage service for OpenStack. request and consume these resources without requiring any knowledge of where your storage is actually deployed or on what type of device. The prototype file-sharing service similarly provides coordinated access to shared or distributed file systems. Overview of the OpenStack architecture. A router can have one gateway and many subnets connected. Keystone uses the Apache web server as the front-end, so you no longer need to start the OpenStack-keystone service. Its mission is to implement advanced network services, driven by the neutron API and running on a distributed control plan. Neutrons -metadata -agents: provides the ability of instances to get information such as hostname, ssh keys, etc. Secure and isolated object storage through the use of Docker containers. 50 51 Storage – Freezer Freezer is a distributed backup, restoration and disaster recovery as a service platform. OpenStack 24 Sample Deployment Architecture. The observer provides a complete optimization loop – including everything from a metrics receiver, optimization processor and an action plan applicator. Numbers: Keystone a few minutes of 'WC' and LOG LOG' – 20 Contributors in the same shape of the same size, but twice as active 17. It is designed to support the support to support networks and large-scale production loads. The keystone supports multiple forms of authentication, including login name and password, token-based credentials, and REST API logins. 21 22 Security and identityÂ KeystoneFrom an architectural point of view, Keystone is the simplest service in the cloud. It does this by providing a standard framework of APIs and services that allows providers to introduce multiple data protection services in a coherent and unified flow to the user. neutr open switch agent µ: Receives commands from the neutron server and sends them to the Open vSwitch (OVS) for execution. incineration volume : The service works with a storage back-end through drivers. Dnsmasq Is a lightweight DHCP (Dynamic Host Configuration Protocol) and DNS cache server. 31 32 Data storage - Swift 32 33 Data storage - Swift 33 34 Application service - heatingThe service's primary purpose is to manage the entire infrastructure and application lifecycle in OpenStack clouds. Objects are available via HTTP/ HTTPS URLs and protocols. You can describe such a process as a set of tasks and task µ (through the YAML-based language) and upload such a description to Mistral so that it takes care of state management, correct execution order, parallelism, synchronization, and high availability. cinder-backup The backup service works with the backup back-end through the driver architecture. 7 8 Computing - New The main services that support New Section:new-api: This service receives REST API calls from other services and clients and responds to them. This on-demand, horizontal sizing feature differentiates Octavia from other load balancing solutions µ make it really suitable for ÂÂ µfor the cloud. Agenda ¢ÂÃ¢Â Overview of Cloud computing, Service model and deployment. stack.sh: shell scripted source install quickest path to running code that is accessible to change see everything that gets installed and configured nova services, glance, keystone, swift, dashboard and quantum runs all the services in named screen sessions 27. ome numbers: Dashboard 16,821 lines of code 2,023 comments 3,606 blanks ~26 contributors 30 Day Commit Activity 11committers made 91commits 338 files modified 50421 lines added 35569 lines removed 16. It is similar to heat-api by function. The selection of Hypervisor is based on its weight and filters. 37 38 Components More than 40 projects in different categories: ComputeStorage Networking Data & Analytics Security & Identity Management Tools Deployment Tools Application Services Monitoring & Metering 38 39 Compute Nova - Compute Service Glance - Image ServiceIronic - Bare Metal Provisioning Service Magnum - Container Orchestration Engine Provisioning Storlets - Computable Object Store Zun - Containers Service 39 40 Compute - Nova To implement services and associated libraries to provide massively scalable, on demand, self service access to compute resources, including bare metal, virtual machines, and containers. ¢ÂÃ¢ÂProven Software. JSON-based template format. 73 74 Management Tools - VitrageVitrage is the OpenStack RCA (Root Cause Analysis) service for organizing, analyzing and expanding OpenStack alarms & events, yielding insights regarding the root cause of problems and deducing their existence before they are directly detected. Only a user with an admin role can create a public network. ome numbers: Swift 34,784 lines of code 6,790 comments 5,015 blanks ~36 contributors 30 Day Commit Activity 7 committers made 30 commits 21 files modified 748 lines added 183 lines removed 14. Security Group: The set of ingress and egress firewall rules that can be applied to one or many virtual machines. Horizon gives access to only about 70-80% 49 50 Storage â Karbor Karbor deals with Data and Meta-Data protection that comprises an OpenStack application deployed against loss/damage (e.g., backup, replication) â glance-api: Accepts Image REST API calls for image discovery, retrieval, and storage. Cloud Service Model Private Infrastructure Platform Software (On-Premise) (as a Service) (as a Service) Applies µes Appliesµes Appliesµes Execution Times Execution Times Implementation Times Security and Integration Security and Integration Databases Databases Databases Servers Servers Virtualizes Virtualization Virtualization Virtualization Server Server Serv Server HWW Server Warehouse Warehouse Warehouse Warehouse Warehouse Warehouse Warehouse Warehouse Warehouse Storage Networking Networking Networking Networking Networking Networking Networking Networking Networking Networking Networking by supplier 6. Ã¢ Involve in Persistent mainly in Cloud and R&D Networks. 67 68 Security & Identity Logically, Swift consists of unstable threads: accounts, accounts and objects. 55 56 Networking â Kuryr Kuryr provides a bridge between account structure networks and storage models for OpenStack network and storage µ. strike 1. 59 60 Data & Analytics Trove â Database as a ServiceSahara â b 34 35 Application Service â Heat35 36 Application Service â Commands: Heat-API: Accepts a native OpenStack REST API calls for template processing. The aim is to facilitate the orchestration of the µ of similar objects. Api-cloudwatch: an additional AWS CloudWatch-CompatService implementation. 13 14 Storage - Cinder 14 15 Storage - Cinder's OpenStack Block Storage Service consists of four services implemented as GNU/Linux daemons: Cinder -API: API service provides an HTTP endpoint for requesting API µ. 24 25 NETWORKING - Floating IP address of neutrons: an IP address that can be associated with a virtual machine so that the instance has the same IP as the public network whenever it boots. 78 79 Deployment Tools - CharmsDevelop and Maintain JUJU charms to deploy and manage OpenStack services. Port: a virtual network port on the OpenStack network. Its purpose Is to enable a scalable means of storing short- and long-term data for use cases such as auditing and system debugging. A subnet can be private or public. Ã¢ â¬ Ã¢ Questions and answers. Ã¢ â¬¢ What's OpenStack. The SWIFT account corresponds to the project/tenant in other OpenStack services. Other components of OpenStack can integrate with Zaqar to the end user's super events and communicate with guest agents that are running on the "overkill" layer. Helps with horizontal scalability. Virtual network interface card (VNIC) or virtual network interface (VIF): an interface connected to a port on a network. The engine does all the work of orchestrating, launching templates and providing feedback to the customer. For the orchestra, the Heat uses models that describe instantiations, networks, volumes, etc. OpenStack 25 sample deployment architecture. Unlike Magnum, Zun© for users who want to treat their accounts as a resource managed by OpenStack. OpenStack cloud compatibility means companies are ready for sevahc sevahc sartuo e aimonoce ,a§Ânaruges ed sacitÃlop me esab moc - saterroc o£Âtse seµÃ§Âidnoc sa odnauq sacilbºÃp snevun arap sovitacilpa e sodad ed o£Ã§Âargim a odnatilicaf - criteria. For large-scale deployments, it is recommended to set up a cache layer in front of Horizon, for example, the memcached daemon. It's all involved. References and links 1 Openstack Components 1 1 2 Components 2 3 Components 3 4 Components More than 40 projects in different categories: ComputeStorage Networking Data & Analytics Security & Identity Management Tools Deployment Tools Application Services Monitoring & Measurement 4 5 Computing – New 5 6 Computing – Nova one of the basic services installed on all nodes of cluster computers It manages the abstraction level of virtual equipment (processors, memory, block devices, network adapters) Nova provides management of instances of virtual machines by addressing the hypervisor and giving such commands as it is starting and stopping 6 7 Computing – New OpenStack Compute (New) service is the heart of the OpenStack cloud manage basic functions of virtual machines like create, start, stop, etc 62 63 Data & Analytics – SearchlightThe Searchlight project offers indexing and search capabilities in OpenStack resources. Its goal is to achieve high performance and flexible queries combined with near real-time indexing. If the Keystone endpoint for a service is set, Horizon will detect it and enable support for optional services such as Cinder, Swift, and Heat. 66 67 Security and Identity – CongressCongress is an OpenStack project to deliver policy-as-a-service across any set of cloud services in order to deliver governance and compliance for dynamic infrastructures. Glance has a RESTful API that allows you to query the VM image metadata as well as retrieve the actual image. > 110 Companies >1556 People Hardware Service Providers >50 M Venture Capital 11. A It is a compiled and packaged code (for example, a .jar file) that can be loaded into Swift as as as Another object. 86 87 Application Services - Solumpara make the cloud services more fanciful to consume and integrate with the application development process, automating the image process for image and simplifying the implementation centered on application. Horizon can also work with services that are outside the scope of the OpenStack Administrator certified exam and this book, such as Ceilometer, Sahara, and Trove. Octavia delivers its delivery of cargo balancing services by managing a fleet of virtual moms, containing bare-metal servers that rotates on demand. Metadata of images are stored in the Glance database, usually as a mariadb instance. 19. Glance uses spare storage plug-ins, which can be your local file system, Swift object storage, ceph storage, or Network File System. The network consists of subnets, and each sub-right is a subdivisions of an IP network. 22 23 Networking - Neutron OpenStack networking is one of the most complicated openstack services. Heat: The click tool that communicates with the heat API. 42 43 Computation - Magnum Magnum makes engines of orchestra. Projects ¢ GLATE-REGISTRIC: Stores, processes and recovers metadata about images themselves by imagesglance not stores images by itself. Cloud Implementation Model 1.Nuvem Placid 2. Private Note 3.New 7. The Open Code Platform means that you are never linked to a proprietary supplier, and the modular design can integrate with inherited or third party technologies to meet your business needs. 87 88 Monitoring & Measurement CeilÃ´metro - Monitoring & Data Collection ServiceCloudkitty - Billing and Chambacks Moncasca - AODH Monitoring - PANKO ALARMAIR SERVICE - EVENT, SERVICE, SERVICE the indexion of metadata 88 89 - CeilÃ´metroThe goal of CeilÃ´metro is to efficiently collect, normalize and transform the data produced by OpenStack services. Logic architecture of OpenStack Folsom version 22. heat-api-cfn: This is egami taht snur dna setenrebuK dna rekcoD sniatnoc hcihw egami SO na etartsehcro ot taeH sesu mungaM .ecnamrofrep kcatSnepO tceffa erawdrah dna serutcetihcra tnemyolped tnereffid woh etagitsevni dna ,seussi ecnamrofrep dna gnilacs tceted ,ecnamrofrep kcatSnepO tceffa segnahc edoc wen woh no desucof gniliforp dna gnirusaem etamotua ot desu eb nac taht kcatSnepO rof loot sisylana ecnamrofrep dna gnikramhcneb a si yllaRyllaR - slooT tnemeganaM 27 17 .flesti atadatem dna atad sniatnoc taht tcejbo na htiw skrow egarots tcejbo ,egarots elif ot tsartnoc nI .ytilibixelF dna lortnoCÃ¢ÃÂ¢ kcatSnepO yhW . 1102 hcraM ecnis kcatSnepO no evitca dna gnitubirtnoC Ã¢ÃÂ¢ .noisnapxe yticapac duolc dna ,VFN rof krowten 2L norteuN ssorc ,noitalosi ciffart tsew-tsae ,ycnadnuder knil tenretni rof sPSI laud ,ytilibaliava hgih noitacilppa edulcni sesac esU .IPA sÃ Ã € Ã ¢ Ecivres etupmoc eht hguorht senihcam lacisyhp dna lautriv htob noisivorp ot elbissop si ti, secivres krowten dna etupmoc yl etairporppa si ecivres lateM eraB eht nehW .noitaerc stohspans dna ytilanoitcnuf pukcab eht sreviled osla ecivres sihT .tnemnorivne kcatSnepO na fo noitarugifnoc dna tnemyolped eht rof selor dna skoobyalp elbisnA sedivorp elbisnA-kcatSnepOelbisnA - slooT tnemyolpeD 08 97 .kcatSnepO htiw krow ot dengised noitulos gnicnalab daol elacs-rotarepo ,ecruos nepo na si aivatcO aivatcO - gnikrowteN 75 65 .erom dna sliated erawdrah edon ,ygolopot retsulc ,noisrev krowemarf eht sa hcus sretemarap noitarugifnoc gniyficeps yb dehsilpmocca si sihT .secitcarp tseb ytinummoc gnisu elbadargpu dna ,elbailer ,tsaf ,elbalacs era taht sduolc kcatSnepO gnitarepo rof sloot tnemyolped dna sreniatnoc ydaer-noitcudorp sedivorp alloKalloK - slooT tnemyolpeD 87 77 .sduolC laremehpe egral gnidulcni ,stnemnorivne lla rof lufesu gnieb ta demia si tI .kcatSnepO ni etubirtnoc ot woH Ã¢ÃÂ¢ .tenbus cilbup eht hguorht dlrow lanretxe na ot ssecca teg nac senihcam lautriv .esabatad dna rekorb egassem a sesu avon .ecivres i Pa Virtual machines or bare metal in a cluster configuration. OpenStack 20 component. OpenStack Cloud OpenStack is a community of open ³ developers, organizes µ and users who are building and running the open ³ cloud operating system. nova-nonvncproxy and nova-consoleauth: These are two services to provide access to the instance console via the remote access VNC protocol. REST API for Domain/Record Management Integrated with Keystone for Authentication 54 55 Network DragonflowDragonflowA distribution control plan implementation of Neutron. is primarily required to enable mÃ© trica collection for high availability and autoscaling functionality. At the beginning Ã¢ Ã¢ Ã¢ 9 you can use two model formats with the OpenStack Orchestra: Heat Orchestration Template (HOT): OpenStack native YAML-based template format. If a Virtual Machine is connected only to private subnet, only other virtual machines on this network can access it. New/Quantum Architecture http EC2/Openstack API EC2/Admin API Glance API Glance API New API Compute Glance Image Nova Nova Nova Network/ Registry Store Queue Database Quantum Manager (swift,etc) Glance Database Volume Nova Nova Storage Volume Schedule Adapted from 23. Zun-managed accounts must be well integrated with other OpenStack features such as Neutron network and Cinder volume. Once loaded, the storlet can be invoked over data objects in Swift. Contact me: hitesh.wadekar@gmail.com. 61 62 Data & Analytics – SaharaThe Sahara project aims to provide users with a simple means of provisioning data processing structures (such as Hadoop, Spark and 42 Compute – Ironic Ironic is an OpenStack project that provides bare metal (as opposed to virtual) machines. penStack Releases 18. CloudKitty supports multiple collectors, multiple sorting policies and multiple outputs. 9 10 Compute – Glance OpenStack Image Service (Glance) runs the catalog of virtual machines, which users can use as models to run instances of virtual machines in the cloud. The collected data is intended to be used to create different visualizations and help solve various telemetry use cases. Swift is ideal for storing unstructured data that can grow without limit. This daemon is typically run only on compute nodes. 23 24 Network – Neutron Router: A virtual network device that passes network traffic between different networks. The service has a fully RESTful API, which developers can use to send messages between various components of their SaaS and mobile applications. There are several major components in the OpenStack Networking Tenant network: a virtual network that provides connectivity between entities. 28 29 Network – Neutron Neutron consists of several services that are implemented as standard GNU/Linux daemons: neutron-l3-agent: Provides routing and Network Address Translation (NAT. The cinder-api checks the identity requirements for an incoming request and then forwards them to the cinder volume for action via the message broker. 10. It creates and operates clusters of homogeneous objects exposed by other OpenStack services. 12 13 Storage – Cinder instances use an ephemeral stsisnoc nortueN nortueN - gnikrowteN 82 72 nortueN - gnikrowteN 72 62 nortueN - gnikrowteN 62 52 .atad yranib war dna setacifitreC 905.X ,syek noitpyrcne ,sdrowssap sa hcus ,atad terces fo tnemeganam dna gninovorp ,egarots eruces sedivorp tI .emitnur ta puor G ytiruceS a egnahc ot elbissop si tI .retuor lautriv ro CINv dna tenbus eht neewteb noitcennoc a si tI .noitca rof sni-gulp gnikrowteN kcatSnepO eht ot sub egassem hguorht stseuqer IPA setuor dna stpeccA .dlrow eht ni sduolc etavirp dna cilbup tsegral eht fo emos srewop yadot taht t erawtfos emas eht nuR .duolc kcatSnepO na gnitrats nehw dellatsni eb ot tnenopmoc tsrif eht si enotsyeK yllausU .etalpmet a ni ecruoser a sa puorg gnilacs a edulcni nac uoy os ,secivres yrtemeleT kcatSnepO eht htiw setargetni taht ecivres gnilacsotua na sedivorp osla taeH .stnemyped duolc kcatSnepO ot noitamotua TI elbailer dna elbalacs gnirb kcatSnepO rof seludom teppuP ehTteppuP - slooT tnemyolpeD 18 08 .3 .repoleveD erawtfoS a ma I Â ÂÂÃ¢ rakedaW hsetiH ÂÂÂ Ã¢ em tuobA .secivres kcatSnepSnepO gniyolped rof c fehC sdliub maet kcatSnepO fehC ehTfehC - slooT tnemyolpeD 77 67 ecivres tnemyolpeD - OelpirT kcatSnepO rof seludoM teppuP - kcatSnepO teppuP kcatSnepO rof skoobyalP elbisnA - elbisnA-kcatSnepO kcatO rof rof smrah C ujuJ - smrahC kcatSnepO tnemyolped reniatnoC - alloKcatSnepO rof skoobkooc fehC - kcatSnepO fehC slooT tnemyolpeD 67 57 .retnec atad ni erutcetihcrA detneirO ecivreS dna gnikrowteN denifeD erawtfoS :yduts tnerruC 131 devomer senil 285021 dedda senil 856182 deifidom selif 323 stimmoc 137 edam srettimmoc 24 ytivitcA timmoC yaD 03 srotubirtnoc 541~ sknalb 149,91 stnemmoc 778,91 edoc fo senil 273,97 avoN :srebmun emo noitacilacilnoitaciln ppa eht rof secruoser erutcurtsarfni etartsehcro ot taeH kcatSnepO sesu onaruM .taeH fo ecivres niam ehT :enigne-taehtaeH - ecivreS noitacilppA 73 63 .lortnoc sehsiuqniler resu tnerruc eht nehw etats lanigiro sti ot strever dna ti no edam segnahc eht evas ton ton seod emulfo dnik ov yb yb services that are implemented as standard GNU/Linux daemons: neutron-server: The main service of Neutron. 51 52 Networking Neutron - Networking Designate - DNS ServiceDragonflow - Neutron Plugin Kuryr - Container plugin Octavia - Load Balancer Tacker - NFV Orchestration Tricircle - Networking Automation for Multi-Region Deployments 52 53 Networking - Neutron OpenStack Neutron is an SDN networking project focused on delivering networking-as-a-service (NaaS) in virtual compute environments. 63 64 Security & Identity Keystone - Identity serviceBarbican - Key Management Congress - Governance Mistral - Workflow service 64 65 Security & Identity - KeystoneKeystone is an OpenStack service that provides API client authentication, service discovery, and distributed multi-tenant authorization by implementing OpenStack¢ÂÂs Identity API. Filters can include an amount of memory, a requested availability zone, a set of group hosts, among others 8 9 Compute - Nova nova-conductor: This is the proxy service between the database and the nova compute services. An Open Source Cloud Framework Hitesh Wadekar 2. It gets requests from the scheduler and responds to read and write requests sent to the block storage service to maintain state. 93 94 References Openstack Official Website: Andrey Markelov: Certified OpenStack Administrator Study Guide 94 17 18 Management Tools ¢ÂÂÂ HorizonThe minimum required set of running OpenStack services comprises Keystone, Nova, Neutron, and Glance. 29 30 Storage - Swift OpenStack Swift is a highly available, distributed, eventually consistent object Software Defined Storage (SDS) system. 65 66 Security & Identity - BarbicanBarbican is the OpenStack Key Manager service. 68 69 Management Tools Horizon - DashboardOpenStack Client (CLI) - Command-line client Rally - Benchmark service Senlin - Clustering service Vitrage - RCA (Root Cause Analysis service) Watcher - Optimization Service 69 70 Management Tools - HorizonHorizon is the canonical implementation Dna polevedoelpirt - sloot tNemyoped 28 .12 kcatsnepo fo erutcetihcra lautpecnoc .Sicivres)tfiws(tcejbo dna)ecnalg(Egami ,)nortmoc ,)Avon stedic sa ro yltnednepedni desu eb yam tI .tnemnorivne detubirtsid a ni redro ralucitrap a ni detucexe eb ot deen taht spets detcennocretni tcnitsid elpitlum fo tsisnoc sessecorp ssenisub tsoM .kcatSnepO htiw setargetni taht noitulos ecivres-a-sa-gnirotinom tnarelot-tluaf ,tnamrofrep ,elbalacs Ylhgih ,tnanet-itluos-neps that y acsanom acsanom acsanom 19 09 .Serutaef Rehto ynam dna)siddon Elpitum Revo Noitazinorhcny Pudexcny ,sabcny ,sabsab , Dna ycneiciffe gnidivorp No desucof ,)DSB* ,SWODNIW ,swodniw(so itum eb ot dengsed sit the .No Enihcam Lautriv a gnnaur rof edupmoc stretsni eht stred scnat scate r sekat tI :reludehcs-avon .secivres kcatSnepO rehto ni stnuocca ot dnopserroc sresu tfiwS .redniC deman ecivres egarots kcolb a fo esu eht si duolc kcatSnepO ni yltnenamrep atad gnirots rof sdohtem eht fo enO .noitamroFduolC SWA htiw elbitapmoC :)etalpmeT noitamroFduolC SWA(TFC .Qmubbar the recorb egassem eht dna bdairam esabatat eht Tluafed yb .Retemoliec yb detellloc atad tneve ro elpmas tsniaga sear denifed no desab snoitca reggergrt tneilC eliboM tneilC krowteN srevreS KCATS tnemeganaM 8002 ofnI circ utnubU ecivreS beW swodniW tenretnI eht hguorht dereffo secivres dna secruoser fo tes si gnitupmoc duolC gnitupmoC duolC .21 stnenopmoc rehtOÃ¢ÃÂ¢ :ecivreS mutnauQ kcatSnepOÃ¢ÃÂ¢)ecnalG(ecivreS egami kcatsâ€â)Tfiws(Erots tcejbo kcatsnepoâ€â€â€â)Avon(etupmoc kcatsnepoâ€â€â€Trp Kcaredo tvitnires tvitnire bhsad tooling and infrastructure able to deploy OpenStack in production, using OpenStack itself wherever possible. VM images made available through Glance can be stored in a variety of locations from simple filesystems to object-storage systems like the OpenStack Swift project. You will need to use a web browser with JavaScript and HTML5 support while working with Horizon. As for many other OpenStack services, OpenStack Identity service uses the MariaDB/MySQL database. 15 16 Storage - Cinder cinder-scheduler: Scheduler service reads requests from the message queue and selects the optimal storage provider node to create or manage the volume. Object storage can distribute requests across a number of storage hosts. nova-compute: This is the main part of an IaaS system. 53 54 Networking - DesignateDesignate provides DNSaaS services for OpenStack. 82 83 Application Services Heat - Orchestration Zaqar - Messaging ServiceMurano - Application Catalog Solum - Software Development Lifecycle Automation 83 84 Application Services - HeatHeat orchestrates the infrastructure resources for a cloud application based on templates in the form of text files that can be treated like code. Glance supports many different formats, including vhd , vmdk , vdi , iso ,qcow2 , and ami. ami.
